

SECV3263 MULTIMEDIA WEB PROGRAMMING

SEMESTER 2 2025/2026

ALTERNATIVE ASSESSMENT – INDIVIDUAL SELF REFLECTION

Name: HARRESH A/L UTHAYAKUMAR
Matric No: A23CS0226
Role: ANIMATION DESIGNER

I initiated the 3D Scene Configurations task by setting up the base code for our Interactive 3D Portfolio Website using plain Three.js and vanilla JavaScript. I built the starting structure for the Landing Page hero scene, the Skills Showcase, and the Project Gallery, including the five 3D objects, basic animations, lighting setup, camera controls, and mouse and keyboard interactions required by the assignment. I also set up the single-page layout so all sections could scroll together in one file. From there, my teammate took the base code and made many further improvements and modifications to refine the scenes and add more features.

The main challenge for me was getting the foundation right so it could be built upon later, such as making sure the scenes fit properly into sections instead of taking up the whole screen, and fixing early bugs like duplicate HTML ids that caused the page to crash. Through this task, I learned the basics of setting up a Three.js scene from scratch without a framework, including creating geometries, lighting, and camera controls, as well as how to structure code in a way that is easier for teammates to continue working on. I would like to improve by learning more advanced Three.js techniques so I can contribute more to the later refinements myself in future projects.
